

## Patent Claims

1. A DSTN display with electromagnetic protection, comprising an active cell (1) and a passive cell (2),  
5 the active cell (1) having electrodes (12, 13) and the passive cell (2) facing an observer of the display, characterized in that the passive cell (2) has an electrically conductive transparent layer (18, 19), in that the electrically conductive layer (18, 19) is  
10 electrically conductively connected to a defined potential, in particular the ground potential (G), in that the electrically conductive layer (18, 19) is partly interrupted.
- 15 2. The display as claimed in claim 1, characterized in that the transparent layer (18, 19) is composed of indium tin oxide.
- 20 3. The display as claimed in one of the preceding claims, characterized in that the metallic layer (18, 19) is connected to the defined potential, in particular the ground potential (G), via a flexible sheet conductor (7).
- 25 4. The display as claimed in one of the preceding claims, characterized in that the display (A) is surrounded with a metallic housing (30) at its side and its rear side, in that the metallic layer (18, 19) of the display is electrically conductively connected to  
30 the housing (30).
